TO OUR CUSTOMERS

PRICES—Quoted are for best commercial grade and quality. TREES SELECTED BY CUSTOMERS AT THE NURSERY WILL BE CHARGED FOR IN ACCORDANCE TO THEIR VALUE. We quote by height but it must be remembered that the height does not always indicate the value of a tree or plant—a very short and compact specimen is more valuable than a slim, straggly one of the same height. Customers can rely upon our selecting full value for the prices charged. We are firm believers in the graded stock system not generally in use in the nursery business. We grade according to height and caliper.

DELIVERY—At prices herein quoted we will deliver free to near-by customers with our own wagons. Distant orders will be safely and securely packed in boxes or bales and delivered F. O. B. cars here, freight or express charges to be paid for by the purchaser.

TERMS—Customers with whom we have had no dealings heretofore should remit with order, or send satisfactory references. Old and known customers can, if they wish, remit on receipt of goods. All accounts are due, NET CASH, as soon as goods are received. Remit by Check, Draft, Express or Money Order, one and two-cent postage stamps accepted for small amounts.

EARLY ORDERS—Customers should send in their orders as early as possible so we can place them on our digging list. Our work in the digging season is necessarily very much crowded owing to our dependence on the weather conditions, and we can only in exceptional instances fill orders in other than regular turn.

DIGGING SEASON—Usually commences end of September in the fall continuing so long as ground holds open. In the spring from the middle of March until middle of May.

GUARANTEE—We guarantee all our stock true to name and in good condition on leaving our hands, but do not guarantee it to live and grow under all conditions, nor do we make up any loss whatever, due to climate effects, or after culture on the part of the purchaser. In case any mistake should happen in the naming of a plant we will replace it with the true variety as ordered, but we are not liable to more than its original invoice value in refunding money.

TRANSPLANTING HINTS

We especially desire to impress upon all interested the importance of using only good soil and using it abundantly in planting all trees.

If the grade is not changed and there exists good natural fertility, no special preparation is required. If the grade is changed we urge the absolute importance of excavating a large area of subsoil and filling in with good top soil. Do this a year in advance if possible, that the soil may become compact. If this cannot be done, firm well the soil as the new hole is filled. Be careful to put fine mold about the roots, but above all be sure it is in close contact. Broken and mutilated roots should be cut off smooth, that they may callus quickly, and from them new roots will issue.

Wet the roots before putting earth on them, that it may adhere closely. Plant in well-drained soil and at about the same depth as the tree or plant stood in the nursery.

We do not approve of indiscriminate and extensive pruning at any period of the tree's life, but if the roots are much shortened some pruning of the top is necessary to maintain a balance. Beech, Oak, Sweet Gum, Mulberry and Tulip trees ought to be shortened in very severely.

Cut to the trunk or a bud always, that you may not later have unsightly and dead spurs on the tree that delay the process of healing.

Mulch the surface after planting with anything that will conserve moisture, and for this purpose leave the surface of the soil loose and porous, applying in addition brush, straw or coarse manure. The latter is best, since by leaching it adds the element of fertility.

Planting Evergreens is more difficult than planting deciduous trees, particularly if large, and extra care must be taken to keep the roots from becoming dry. Chances of success are much greater with small and medium sized trees, and choice and rare sorts should be moved with a ball of earth attached when possible. The safety of this practice very greatly counterbalances increased cost, and we strongly urge patrons to adopt it.

ORNAMENTAL DEPARTMENT

DECIDUOUS TREES

The trees offered in this list have been transplanted several times, are well rooted, of symmetrical shape and of quality described. We care for our trees and destroy annually hundreds that do not measure up to our standard of excellence. Most of our deciduous trees are graded by caliper measured 6 in. above ground, which is incomparably the best standard for the purchaser. A tree 12 to 15 feet in height may not caliper as much as one 10 to 12 or even less and if it is thus unproportioned it is an inferior tree. We have bought some of these offerings at what seemed an astonishing low price but always to our sorrow.

DECIDUOUS SHRUBS

The shrubs we offer are of standard commercial grade, young and thrifty. They are not crowded in rows to make them grow tall but are given space enough for proper development. This insures a bushy and full plant which far more than height ought to be, and indeed is, the standard of excellence. Nearly all our shrubs are dug with a tree digger, thus insuring good roots, and are exactly what we represent them to be in all particulars.

CONIFERS AND EVERGREENS

These have all been transplanted, most of them several times, giving ample room for full development and frequently sheared to produce compact, symmetrical specimens. Those marked with a** will be dug at the prices named, with the soil adherent to the roots and securely tied in burlap. We will dig in like manner, the others at an additional charge of 6c each for 1½ to 2 ft., 8c for 2 to 3 ft., 10c for 3 to 4 ft., 15c for 4 to 5 ft., and 20c for 5 to 6 ft.

HARDY HERBACEOUS PERENNIALS

We try to supply most of our perennials in field grown (F. G.) stock, but where we run short, especially later in the spring season, we supply pot-grown (P. G.) stock from 2½ in. pots. For late spring planting we advise the setting of pot-grown stock.
